**DOSAGE / PREPARATION / ADMINISTRATION**

The source text states to cook Ge Gen (Radix Puerariae Lobatae) first in 8 cups [1,600 mL] of water until the liquid is reduced to 6 cups [1,200 mL]. Add the other ingredients and cook until the liquid is reduced to 2 cups [400 mL]. Take the warm, strained decoction in two equally-divided doses daily. Today, the decoction can be prepared using the dose of Ge Gen (Radix Puerariae Lobatae) suggested in brackets.

**CHINESE THERAPEUTIC ACTIONS**

1. Releases the exterior  
2. Clears interior heat

**CLINICAL APPLICATIONS**

Diarrhea, dysentery, salmonella infection, amoebic dysentery, bacterial dysentery, gastritis, acute gastroenteritis, acute enteritis, ulcerative colitis, fever, influenza, common cold, measles, poliomyelitis, erysipelas, stomatitis, toothache, trachoma, conjunctivitis, inflammation of the lacrimal gland, and hangovers.

**EXPLANATION**

*Ge Gen Huang Qin Huang Lian Tang* (Kudzu, Coptis, and Scutellaria Decoction) was originally presented in *Shang Han Lun* (Discussion of Cold-Induced Disorders) for treating unresolved exterior wind-cold with heat invading the interior. This condition occurs when the exterior condition is incorrectly treated with downward draining herbs, leading to continued presence of exterior heat (minor condition) and its transformation into interior heat (major condition). Feverish sensations in the body indicate the presence of exterior heat. The interior heat may affect the Intestines and cause foul-smelling heat diarrhea. Interior heat may rise to attack the upper body and cause irritable and feverish sensations in the chest, a dry mouth, and thirst. The heat may damage the Lung to
cause dyspnea, and force body fluids out to the exterior, resulting in perspiration. A yellow tongue coating and a rapid pulse indicate a heat condition.

To properly treat this condition, exterior-releasing herbs must be used to treat the unresolved exterior condition, while interior heat-clearing herbs are used to sedate the interior. This formula contains Ge Gen (Radix Puerariae Lobatae) as the chief herb to dispel exterior factors, promote the production of body fluids to relieve the dry mouth and thirst, and direct Spleen qi upward to relieve diarrhea. Huang Qin (Radix Scutellariae) and Huang Lian (Rhizoma Coptidis) clear heat and dry dampness to relieve diarrhea. Zhi Gan Cao (Radix et Rhizoma Glycyrrhizae Praeparata cum Melle) harmonizes the herbs and calms the middle jiao to help relieve acute discomforts, such as burning sensations of the anus.

**MODIFICATIONS**

- When there is excess heat, add Jin Yin Hua (Flos Lonicerae Japonicae).
- With food stagnation, add Mai Ya (Fructus Hordei Germinatus), Lai Fu Zi (Semen Raphani), and Shan Zha (Fructus Crataegi).
- With vomiting, add Ban Xia (Rhizoma Pinelliae) and Zhu Ru (Caulis Bambusae in Taenia).
- With abdominal pain and cramps, add Mu Xiang (Radix Aucklandiae) and Bai Shao (Radix Paeoniae Alba).
- With abdominal pain and diarrhea, add Bai Shao (Radix Paeoniae Alba) and Zhi Shi (Fructus Aurantii Immaturus).
- For acute bacterial dysentery, add Bai Tou Weng (Radix Pulsatillae), Mu Xiang (Radix Aucklandiae), and Qing Pi (Pericarpium Citri Reticulatae Viride).
- If there is severe rectal tenesmus, add Mu Xiang (Radix Aucklandiae) and Bing Lang (Semen Arecae).

**CAUTIONS / CONTRAINDICATIONS**

Ge Gen Huang Qin Huang Lian Tang is contraindicated in diarrhea caused by cold and deficiency with deep, slow or weak pulse.

**PHARMACOLOGICAL EFFECTS**

1. **Antibacterial:** It has been demonstrated that decoction of Ge Gen Huang Qin Huang Lian Tang has an inhibitory effect *in vitro* against various microorganisms, especially *Staphylococcus aureus*, *Diplococcus pneumoniae*, and *Bacillus dysenteriae*.1

2. **Antipyretic:** In rabbits with artificially-induced fever, administration of Ge Gen Huang Qin Huang Lian Tang was associated with a marked effect to reduce fever, especially between 2-4 hours after ingestion. The treatment protocol was to administer 5 g/kg of the herbal decoction. In addition, the study noted that the effect of the herbs was comparable to 0.28 g/kg of aspirin.2

3. **Antiarrhythmic:** Intravenous injection of a Ge Gen Huang Qin Huang Lian Tang preparation was found to be effective in treating mice, rats, and rabbits with artificially-induced arrhythmia by injection of adrenaline and aconitine.3

4. **Gastrointestinal:** Administration of Ge Gen Huang Qin Huang Lian Tang in laboratory experiments has been associated with relieving diarrhea, slowing the peristalsis of the Intestines, and relieving spasms of the intestinal smooth muscles.4

**CLINICAL STUDIES AND RESEARCH**

1. **Diarrhea:** Ge Gen Huang Qin Huang Lian Tang has been shown via many studies to effectively treat diarrhea arising from various causes, such as acute or chronic enteritis, postpartum diarrhea, food poisoning, and infectious diarrhea.5 In one study, 202 infants with acute diarrhea...
were treated with intravenous fluids and oral ingestion of Ge Gen Huang Qin Huang Lian Tang with an overall effectiveness of 88.6%. The average time needed to stop diarrhea was 3.5 days. Another study reported satisfactory results using this formula to treat 513 infants and children with diarrhea in the summer.7

2. Diarrhea during pregnancy: Use of modified Ge Gen Huang Qin Huang Lian Tang in 30 pregnant women with diarrhea was associated with complete recovery in 25 patients, significant improvement in 4 patients, and no effect in 1 case. The herbal treatment contained this formula plus Tu Si Zi (Semen Cuscutae), Sang Ji Sheng (Herba Taxilli), and Ai Ye (Folium Artemisiae Argyi). Additional modifications included use of Bai Shao (Radix Paeoniae Alba) for restless fetus and Shen Qu (Massa Fermentata) for poor appetite. The herbs were given in decoction, in three equally-divided doses daily.5

3. Salmonella infection: Nineteen patients with acute salmonella infection were treated with complete recovery in 16 patients within 4 days, and 3 patients within 5 days.9

4. Bacterial dysentery: Forty patients with acute bacterial dysentery were treated with Ge Gen Huang Qin Huang Lian Tang with great success. The average recovery time was 1.15 days for reduction of fever, 4.51 days for relief of abdominal pain, 3.47 days for recovery of tenesmus, and 2.8 days for resolution of pus and blood in the stool. Overall, most patients reported stabilization of their symptoms within an average of 3.4 days.10 Another study reported 96% effectiveness for treatment of acute bacterial dysentery in children using modified Ge Gen Huang Qin Huang Lian Tang via rectal enema. The treatment protocol was to cook the herbs in water to obtain 200 mL of herbal solution. Normal saline (300-500 mL) was used first to cleanse the intestines, prior to instilling 100 mL of the herbal solution. This procedure was repeated two times daily, for 3 days. Of 50 patients, the study reported significant improvement in 38 patients, improvement in 10 patients, and no benefit in 2 patients.11

5. Amoebic dysentery: One study reported 98.28% effectiveness using herbal therapy to treat 116 patients with amoebic dysentery. The herbal treatment contained Ge Gen Huang Qin Huang Lian Tang and Bai Tou Weng (Pulsatilla Decoction), with addition of Hou Po (Cortex Magnolioae Officinalis) and Huo Xiang (Herba Agastachies), and removal of Qin Pi (Cortex Fraxinii), as the base formula. Additional modifications included Jin Yin Hua (Flos Lonicerae Japonicae) for high fever; Di Yu (Radix Sanguisorbae) for the presence of blood in the stools; Ban Xia (Rhizoma Pinelliae) for nausea and vomiting; and Bai Shao (Radix Paeoniae Alba) for abdominal pain. The herbs were given in decoction daily in two equally-divided doses. The study reported complete recovery in 114 of 116 patients.12

6. Enteritis: Use of this formula plus Bai Tou Weng (Radix Pulsatilliae), Chi Shao (Radix Paeoniae Rubra) and Lian Qiao (Fructus Forsythiae) was effective in treating all 22 infants with enteritis. The herbs were given via rectal instillation, 40-50 mL rectally two times daily for 3-7 days.13

7. Ulcerative colitis: Thirty patients with chronic ulcerative colitis were treated with Ge Gen Huang Qin Huang Lian Tang with recovery in 10 patients, significant improvement in 12 patients, and slight improvement in 3 patients. The treatment protocol was to flood the colon with 250 mL of the decoction one time daily for 15 days per course of treatment, for a total of 1-3 courses of treatment.14 Another study reported 87.5% effectiveness using modified Ge Gen Huang Qin Huang Lian Tang to treat 32 patients with chronic ulcerative colitis characterized by Large Intestine damp-heat and Spleen and Stomach weakness and deficiency.15

8. Gastritis: Sixty patients with chronic superficial gastritis were treated with good results using Ge Gen Huang Qin Huang Lian Tang plus Xiang Fu (Rhizoma Cyperi), Bai Shao (Radix Paeoniae Alba), and Hua Xiang (Herba Agastachies). Additional modifications included use of Bai Hua She She Cao (Herba Hedysoris) for constipation; Mu Xiang (Radix Aucklandiae) for loose stools; calcined Wu Leng Zi (Concha Arcae) for acid reflux; and Zhu Ru (Caulis Bambusae in Taenia) and Ban Xia (Rhizoma Pinelliae) for nausea and vomiting. Additionally, for abdominal distention, Da Fu Pi (Pericarpium Aracae) was added and Bai Shao (Radix Paeoniae Alba) was removed; and for food stagnation, dry-fried Lai Fu Zi (Semen Raphani), Shan Zha (Fructus Crataegi), and Shen Qu (Massa Fermentata) were added, and Bai Shao (Radix Paeoniae Alba) was removed. The study reported relief of gastric pain in all patients within 1-2 weeks of herbal treatment. Of 60 patients, 32 had significant improvement and 28 had moderate improvement.16

9. Fever: One study reported 97% effectiveness using modified Ge Gen Huang Qin Huang Lian Tang to treat 200 children with fever. Modifications to this formula included Qing Hao (Herba Artemisiae Annuae) for fever in spring, Shi Gao (Gypsum Fibrosum) in summer, Jie Cheng (Radix Platycladonis) in fall, and Ma Huang (Herba Ephedrae) in winter. The study reported improvement in 197 of 200 patients.17

**TOXICOLOGY**

The I.D.₅₀, for alcohol extract of the formula via intravenous injection was 13.5 g/kg in mice. The cause of fatality was attributed to cardiovascular effects, with a decrease in heart rate and contractile force of the heart.¹⁸

**AUTHORS’ COMMENTS**

Clinically, Ge Gen Huang Qin Huang Lian Tang is safe for use in any condition involving heat in the Intestines, regardless of whether exterior symptoms are present or not. It is most important, however, not to use it in patients with deficiency and cold of the Spleen and Stomach.

Ge Gen Huang Qin Huang Lian Tang, Shao Yao Tang (Peony Decoction), and Bai Tou Weng Tang (Pulsatilla Decoction) are three commonly used formulas for diarrhea, each with a very different etiology and emphasis.

- **Ge Gen Huang Qin Huang Lian Tang** treats heat invading the interior as a result of the misuse of herbs while the pathogenic factor was still at the superficial level. Chief manifestations include foul-smelling diarrhea with burning sensations in the anus.

- **Shao Yao Tang** treats accumulation of damp-heat and toxins in the Large Intestine, leading to dysfunction and qi stagnation causing severe abdominal pain with blood and mucus in the stool and burning sensations in the anus. The key sign for the use of this formula is rectal tenesmus.

- **Bai Tou Weng Tang** treats accumulation of damp-heat and toxins in the Intestines at the xue (blood) level. The heat is more prominent than the dampness and is deep in the xue level, so more blood will be present in the stool. Other symptoms include abdominal pain, rectal tenesmus, mucus in the stool, and burning sensations in the anus.¹⁹

(Kudzu, Coptis, and Scutellaria Decoction)

DOSAGE / PREPARATION / ADMINISTRATION
The source text instructs to cut the ingredients, cook them in 10 cups of water, and reduce the liquid to 3 cups. Take 1 cup of the warm, strained decoction three times daily. The source text advises to avoid consuming pork and coming into contact with cold water while taking this formula.

CHINESE THERAPEUTIC ACTIONS
1. Clears heat and eliminates toxins
2. Releases the exterior and induces perspiration

CLINICAL MANIFESTATIONS
Unresolved exterior syndrome with interior heat in all three jiaos: high fever, no perspiration, stiffness and a feeling of heaviness of the body and the extremities, dry nose, thirst, fidgeting, irritability, insomnia, delirium, incoherent speech, maculated skin, and a slippery, rapid pulse.

**EXPLANATION**

Shi Gao Tang (Gypsum Decoction) treats unresolved exterior syndrome with interior excess heat in all three jiaos. This syndrome often originates from taiyang syndrome. If the excess exterior symptoms in a taiyang syndrome are not relieved over a period of time, heat and toxins are created in the three jiaos, or all over the body. High fever, no perspiration, stiffness of the body and the extremities, dry nose, thirst, fidgeting, irritability, insomnia, incoherent speech, and delirium all indicate excess at the exterior and heat in the interior. The heat and toxins may also cause maculated skin by forcing the blood out of the blood vessels.

To effectively treat this syndrome, both exterior-releasing and interior-clearing methods need to be used. This
